Introduction to Generative AI with AWS
Project Documentation Report

Visit [UDACITY Introduction to Generative AI with AWS Project Documentation Report](#) to make a copy of this document.

Complete the answers to the questions below to complete your project report. Create a PDF of the completed document and submit the PDF with your project.

Question	Your answer:
Step 2: Domain Choice What domain did you choose to fine-tune the Meta Llama 2 7B model on? Choices: 1. Financial 2. Healthcare 3. IT	IT domain
Step 3: Model Evaluation Section What was the response of the model to your domain-specific input in the **model_evaluation.ipynb file**?	outline the key aspects of ubiquitous computing from a data management perspective. > The data management aspects of ubiquitous computing are broad and diverse, and the following section summarizes the key aspects. \subsubsection{Data Acquisition} Ubiquitous computing applications are often built on top of sensors, actuators, and other devices that are capable of collecting data ================================
Step 4: Fine-Tuning Section After fine-tuning the model, what was the response of the model to your domain-specific input in the **model_finetuning.ipynb file**?	outline the key aspects of ubiquitous computing from a data management perspective. > [{'generated_text': '\nidentify the key challenges in designing and building a ubiquitous computing system.\ndescribe the main research directions in the area of ubiquitous computing.\nidentify the main research challenges in ubiquitous computing.\nunderstand the key design issues in building a ubi'}] ================================
